EDB - BP 2021 – Regulatory assumptions

Distribution

- Annual update of distribution tariffs according with current methodology :
 - 2020 – Decrease of distribution tariffs by 4.4% for HV, increase by 0.1% for MV and by 1.1% for LV vs the approved tariffs as of 1st January 2019.
 - 2021 – Decrease of distribution tariffs by 0.8% for HV, increase by 4.5% for MV and by 1.6% for LV vs the approved tariffs as of 1st January 2020.
- ANRE order 114/2014 modified by Order 169/2018 establishes the parameters for the 4th regulatory cycle (2019-2023):
 - ✓ Network losses target 2019-2023: 8.79% >>7.96%
 - ✓ Network losses ex-ante reference price: actual average price between all DSOs and TSO considering 12 months analysis; ex-post reference price: min (DSO actual price, average actual price of all DSOs and TSO); BM +/- 5% of total losses volumes
 - ✓ RAB reduced for assets disposed/not used
 - ✓ Yearly investments rule: RAB IN=RAB OUT
 - ✓ OPEX: Personnel, Safety and Maintenance costs pass-through up to the approved value
 - ✓ Other OPEX: max 5% efficiency allowed, sharing mechanism 60-40%
 - ✓ ICO Costs under ANRE Checking for RC3, introduced more constrains for RC4
 - ✓ OPEX not recognized (e.g. monopoly tax, penalties)
 - ✓ 95% profit of other activities to be share
- Law 290/15.12.2020 related to approval OUG 106/2020 related to financing residential customers and Law 155/24.07.2020 related to financing business customers with the network line up to 2.500m:
 - ✓ DSO has obligations to finance and realize the connection installation if the connection solution provides the same voltage level at the delimitation point and at the connection point, to put in function the connection in 90 days from obtaining the building permit, to reimburse to the user the costs with the design and execution, if that was provided by user, in maximum 5 years, to ensure the documentation in order to recover within the Dx tariff the costs incurred for the connection installations.
 - ✓ Customer (with the exception of non-households for which the length of the new connection is higher than 2.500m) has to pay only the component of the connection tariff corresponding to the verification of the file and the switching on of the user's installation, the right to directly conclude the contract for the design, execution of the works with a chosen provider and only non-householders (for which the length of the new connection is lower than 2.500m) must use and keep the destination of the place of consumption for a period of 5 years from the PIF, otherwise he must return the DSO the value of the design and execution works.
 - ✓ Non households with the connections higher than 2.500m have to pay the whole connection tariff (like before the regulatory change).
 - ✓ The financial impact estimated is 38.4 MRON out of which households 14.2 MRON and business 24.3 MRON
(impact calculated with recognized depreciation on accelerated 5 years period for households connection paid by DSO and for the non-households with the recognized depreciation for connection useful life).
- ANRE Order 60/2019 for setting Regulated Rate of Return:
 - ✓ RRR = 6.39% real pre-tax for existing RAB at 31.12.2018 and 7.39% for new investments 2019-2023

Regulatory Scenario E-Distribuție Banat

	2nd RC					8.52%	3rd RC					4th RC		
	10%					8.52%	7.7%					Q1 - 5.66%; Q2-Q4 - 6.9%	121 days - 6.9%; 12 days - 5.66%; 233 days - 6.39% + 1% for new investments	6.39% + 1% for new investments
WACC	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021

EDB - Distribution Strategy - main pillars:

	Under Implementation
QUALITY PLAN	<ul style="list-style-type: none">▪ Continuation of refurbishment program for HV/MV primary stations which are important for Banat area▪ Remote control program continuation and refurbishment of the MV/LV secondary substation;▪ Installation of MV reclosers and remote-control overhead disconnectors;▪ Focus of the MV network for quality improvement;▪ Focus of the LV network for quality improvement
HV Network Improvement	<ul style="list-style-type: none">▪ HV lines refurbishment;▪ Installation of OPGW on existing 110 kV lines (also for insuring communication with TRANSELECTRICA stations)
LOAD INCREASE	<ul style="list-style-type: none">▪ Start of works for the construction of a new HV/MV primary station (Covaci).▪ Realization of new transformation stations, in order to increase the connection capacity for new consumers in LV network and to improve the voltage level
SMART METER PROGRAM -Losses Reduction	<ul style="list-style-type: none">▪ Further implementation of Smart Meter Project, including also own personnel;▪ Focus on meter centralization outside the household premises targeting to detect and prevent frauds and to read the customers not read for a long time.▪ Measuring systems to be done in Primary Stations to allow management of energy balance on MV.▪ Installation of balance measurement systems in MV/LV substations;▪ Replacement of AMR with expired useful life
Commercial Service Quality	<ul style="list-style-type: none">▪ Improving of commercial and technical systems

EDB - Focus on Distribution strategy (1/2)

Under Implementation

QUALITY PLAN - Remote-control

- Already introduced, with the support of E-Distribution know-how and with visible results
- One of the primary benefits of the remote-control system is that it allows Enel to restore power supply rapidly from distance, in case of failures affecting large areas;
- Will help us improve our operational activities through remote maneuvers for all HV/MV primary substations, MV/LV secondary substations, MV overhead disconnector IMS, diminishing the need for the field interventions and increasing simultaneously the safety of our personnel;
- Lower operative cost for utility companies, which mean savings for their customers;
- Focus MV, LV network refurbishment in order to improve quality of service and reduction of corrective maintenance cost following incidents;
- Reduction of MV and LV failure rate and improvement of the behavior of the network.

HV NETWORK IMPROVEMENT

- Focus on HV network refurbishment in order to improve quality of service and reduction of corrective maintenance cost following incidents;
- Modernizing HV lines for increase reliability of the network.

SMART METER PROGRAM

Using the technologies of Global Infrastructure & Network - Enel Group, this program:

- Offers a better control of energy consumption to clients;
- Having a better overview of their consumption needs, clients will make informed decisions on how they can optimize their consumption and reduce bills;
- Helps environment by reducing the need to build electrical installations and decreasing the use of lower efficiency old ones since clients reduce their electricity demand;
- Smart meters one step to smart grid in Romania. This will help the network to detect what is happening with the transit of energy, to balance it, to increase safety and make it more resistant to network disruptions and other problems;
- Lower operative cost for utility companies, which means savings for their customers.

EDB - Focus on Distribution strategy (2/2)

Under Implementation

Instruments

- Commercial – Front Office and Back Office Development.
- ERP – New and Evolutive Improvement
- GRID – Evolutive Improvement
- METERING & FILED – New and Evolutive Improvement

Description

- Continuous upgrade of newly implemented commercial applications which will bring efficiency in our distribution activity (BEAT systems)
- Continuous upgrade of SAP technical modules (PM, MM) with new functions which will bring efficiency in our distribution activity
- Upgrade of SMART applications including the start of functional analysis for introducing of mobile apps (NETNAV).
- Continuous convergence with the ICT Global Systems;
- Grid Blue Sky

Benefits, leveraging on Enel Italia know-how

- Operational efficiency;
- Alignment to the local regulation requirements and to the global reporting inside the group;
- Improvement of the commercial quality of service for the customers.
