- The Sole Director intends to use any cash inflows related to portfolio events occurring during 2024 to further implement the DCM techniques set out in the Fund's Investment Policy Statement such as by funding the buyback programme as approved by the Fund's shareholders, additional to the dividend proposal described above.

Note: Values resulted after applying the standard Romanian dividend withholding tax rate (amounting to 16% for the 2010 – 2013 dividend distributions, 5% for the 2018 – 2022 dividend distributions and 8% for the 2023 - 2024 dividend distributions) to the value of the Gross Cash Distribution per Share. Shareholder could benefit from a reduced dividend withholding tax rate or tax exemption, if either Double Taxation Treaty provisions or a specific Romanian tax law exemption was applicable. The tax treatment of cash distributions resulting from a share capital decrease is uncertain under the Romanian tax law. Based on our understanding of Romanian tax law, we are of the opinion there are good arguments to assume that the cash distribution is not subject to Romanian withholding tax.

The price of shares and income from them can go down as well as up and you may lose some or all of your capital invested. The previous results of the Fund do not account for future performances. Currency fluctuations will affect the value of foreign investments. All investments are subject to certain risks. Generally, investments offering the potential for higher returns are accompanied by a higher degree of risk. Stocks and other equities representing an ownership interest in a corporation have historically outperformed other asset classes over the long term but tend to fluctuate more dramatically over the shorter term. Small or relatively new companies can be particularly sensitive to changing economic conditions due to factors such as relatively small revenues, limited product lines, and small market share. Smaller company stocks have historically exhibited greater price volatility than larger company stocks, particularly over the short term. The significant growth potential offered by Emerging Markets remains accompanied by heightened risks when compared to developed markets, including risks related to market and currency volatility, adverse social and political developments, and the relatively small size and lesser liquidity of these markets.
